GENERATE : 6-Steps to I-Pipe

1

Identify the stages in your innovation model and draw your pipeline.

For example, the Unifying Model the stages would look like this:

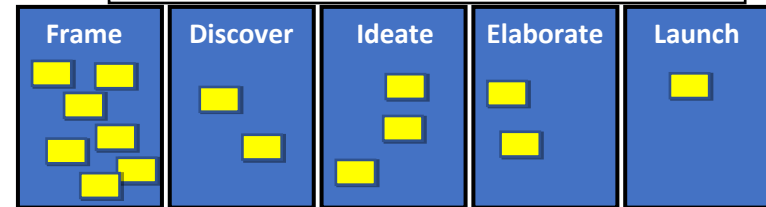

2

Front End:
Determine trigger point to start counting an innovation.

3

Using the Definition/Criteria, conduct an inventory of the current innovation projects that pass the definition and plot them in the correct stage of your process

4

Back End:
Determine how long you will count it as innovation (versus other reporting channels) once it hits the market

5

Determine the metrics you will use to track progress. Go back to pipeline and make sure you have a vehicle to collect this information.

6

Begin reporting the innovation results in the proper operations reviews using the same reporting as other Core Business processes.
